

SCRIM® Continuous Pavement Friction Measurement

WDM's SCRIM® is the most-used network-level continuous friction measurement device in the world.

SCRIM® combines continuous friction measurement with GPS-linked texture, IRI, and geometric data through curves and ramps, at intersections, and in workzones.

WDM provides cost-effective assessments of road conditions, delivered by expert operators using accredited, accurate, robust, and repeatable measurement systems.

For more than 50 years, WDM has helped transportation authorities decide how, when, and where to invest in roads using SCRIM® continuous friction measurement.
